ABSTRACT

The National Science Foundation gathers statistical data to provide a comprehensive picture of federal funds awarded each year. This report presents and analyzes the data for 1974 for federal support to all categories of universiites and colleges; academic science support and R and D activities; science education and other scientific activities; and federally funded research and development centers administered by universities and colleges. Federal support to independent research institutes; and federally funded research and development centers administered by nonprofit institutions are also presented. (JMF)

LETTER OF TRANSMITTAL

Washington, D.C.

DEAR MR. PRESIDENT:

I have the honor to transmit to you the analytical section of the report *Federal Support to Universities, Colleges, and Selected Nonprofit Institutions, Fiscal Year 1974*, as required by the National Science Foundation Act as amended through April 1973.

The statistical portion of this report (*Appendix B, Detailed Statistical Tables*, NSF 75-325) was transmitted previously, under separate cover.

Respectfully,

H. GUYFORD STEVER
Director
National Science Foundation

The Honorable
The President of the United States

Identical letters have been sent to:
The President of the Senate
The Speaker of the House of Representatives

FOREWORD

In recent years increasing interest has been focused on policies concerning the amount and distribution of Federal funds obligated to universities and colleges, the Nation's most important source of basic research and scientific manpower. Some of the issues relating to Federal support of science cover such diverse aspects as: the geographic distribution of funding, the shift from direct support of graduate students to indirect support through research grants, and the increased emphasis on research responsive to national needs. In addition, educational and economic problems have emerged from fluctuating science and engineering enrollments, financial squeezes from rising inflationary conditions, and reduced sources of income.

In order to provide a network of information to examine these and other issues concerning Federal support to the Nation's institutions of higher education, the National Science Foundation Act, as amended in 1968, included as a requirement that NSF ". . .initiate and maintain a program for the determination of the total amount of money for scientific research, including money allocated for the construction of the facilities wherein such research is conducted, received by each educational institution and appropriate nonprofit organization in the United States, by grant, contract, or other arrangement from agencies of the Federal Government, and to report annually thereon to the President and the Congress."

Accordingly, NSF has continued to maintain the Government-wide data reporting system originally established in 1963 under the auspices of the Committee on Academic Science and Engineering (CASE) of the Federal Council on Science and Technology. This report, based on findings from the Federal-wide data system, is designed to serve as an aid to the determination of science funding policies by providing analyses of the agency, geographic, and institutional patterns of Federal academic science support. Information is also provided on federally supported R&D activities at selected independent nonprofit administered Federally Funded Research and Development Centers.

We extend our sincere appreciation to the cooperating staff members of the respondent agencies, without whose help this report would not have been possible. The data analysis and preparation of the report were carried out in the Division of Science Resources Studies, Charles E. Falk, Director.

January 1976

H. Guyford Stever
Director
National Science Foundation

general notes

• Figures shown in these tables for fiscal year 1974 represent total obligations from 14 Federal agencies which accounted for over 95 percent of all Federal allocations to universities and colleges in the United States, and for 99 percent of all Federal obligations for research and development to such institutions. *It should be noted, however, that these proportions may not apply to all individual institutions, some of which receive significant portions of their funding from agencies not included in the survey, such as the Department of Justice, the National Foundation on the Arts and Humanities, or the Consumer Products Safety Commission.* Agencies not included in the survey obligated a total of only $16 million for research and development to institutions of higher education, less than 1 percent of the total.

• The Federal obligations shown in this report for the 122 selected nonprofit research institutes and for seven Federally Funded Research and Development Centers (FFRDC's) administered by nonprofit institutions comprised about 90 percent of total Federal support to all research institutes and FFRDC's managed by nonprofit institutions. The 122 institutes include all those believed to have received $300,000 or more in Federal obligations for research and development.

• Hospitals, professional and technical societies, academies of science, museums, trade associations, and philanthropic foundations are not included in this study. These types of organizations accounted for an estimated 25 percent of all Federal R&D support to nonprofit institutions other than universities and colleges.

• Federal obligations are reported for the fiscal year ending June 30th of the year shown, regardless of when the funds were actually spent. *Obligations* differ from *expenditures* in that funds allocated during one fiscal year may be spent by the recipient either partially or entirely during one or more subsequent years. Loans are excluded, as are agency support of Federal employee training and development activities and all forms of indirect support, such as funds allocated to State agencies, even if the final destination of such funds is known to be an educational institution.

• Interagency transfers of funds are reported by the agency which actually makes the award to an institution rather than by the original source.

• Statistics shown in text tabulations may not add to totals or subtotals because of rounding. Similarly, percents shown may not add to 100.

• Unless constant dollars are specified, data shown in this report are in terms of current dollars. Where data are shown in terms of constant dollars, they are based on the gross national product (GNP) implicit price deflator as determined by the Department of Commerce. The GNP implicit price deflator measures the impact of economic conditions on dollar amounts at the time awards are made by Federal agencies. To the extent that there is a time lag between the Federal awards and actual expenditure of the funds by universities and colleges, future economic conditions have an impact on the real value of purchases of goods and services.

acknowledgments

This report was prepared in the Division of Science Resources Studies, Universities and Nonprofit Institutions Studies Group by J.C. Huckenpahler with the assistance of James B. Hoehn. The survey was conducted and the report prepared under the supervision of Richard M. Berry, Study Director. William L. Stewart, Head of the R&D Economic Studies Section, provided special guidance. Statistical assistance was provided by Mrs. Esther F. Gist.

[1] See note on p. 25.

HIGHLIGHTS

• Federal obligations to institutions of higher education totaled $4,463 million in fiscal year 1974, an increase of 17 percent over the 1973 amount, representing an increase of 8 percent in constant-dollar terms. A large part of this increase resulted from the release in 1974 of impounded 1973 funds.

• Academic science obligations rose by 11 percent to $2,736 million and accounted for 61 percent of all Federal obligations to universities and colleges. In terms of constant dollars, the increase was only 3 percent.

• Federal R&D obligations to universities and colleges reached $2,085 million, an 11-percent increase over the previous year (3 percent in constant dollars). This amount represents 13 percent of Federal R&D obligations to all sectors of the economy, the highest proportion the academic sector has received since 1951 when such data were first compiled.[1] The increase between 1974 and 1975 is expected to be considerably lower, in the neighborhood of 3 percent in current-dollar terms.

• Obligations for R&D plant fell to $29 million, the lowest total in the 12-year history of the survey series. R&D plant programs peaked at $126 million in 1965, and since then there has been a gradual phasing out of these programs at the Department of Health, Education, and Welfare (HEW), and to a lesser extent at the National Aeronautics and Space Administration (NASA) and the National Science Foundation (NSF).

• Among the 14 agencies surveyed, HEW showed the largest increase in absolute terms (from $2,561 million to $3,234 million.) Much of the increase, however, is due to the release in 1974 of impounded 1973 funds. For example, in the National Institutes of Health (NIH) alone an estimated $210 million represented funds impounded in 1973 and released in 1974.

[1] National Science Foundation, *Federal Funds for Science*, Vols. II-XI; *Federal Funds for Research and Development*, Vols. XII-XIII; *Federal Funds for Research, Development, and Other Scientific Activities*, Vols. XIV-XXIV. (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office.)

• Universities and colleges in California received the largest amount of total Federal obligations in 1974 as in 1973—$527 million, or 12 percent of the national total. New York remained in second place with $406 million, or 9 percent of the total.

• The 100 institutions of higher education receiving the largest amounts accounted for 66 percent of all obligations from the surveyed agencies, about the same proportion as in previous years. The University of Washington ranked first, receiving $82 million; Massachusetts Institute of Technology (MIT), formerly in first place, fell to sixth place with $70 million. This was largely because the Charles Stark Draper Laboratory, formerly a component of MIT, became a separate corporate entity, and its Federal funding ($86 million in 1974)[2] was reclassified from the universities and colleges sector to the independent nonprofit institutions sector.

• The surveyed agencies obligated $1,083 million to 21 university-administered Federally Funded Research and Development Centers (FFRDC's), an increase of 7 percent over the 1973 total. However, two of the centers included in the 1973 total underwent status changes during the year, becoming integral parts of their parent institutions;[3] the rate of increase in the remaining FFRDC's was 8 percent.

• Independent nonprofit research institutes received $366 million in Federal obligations for research and development in 1974, an increase of 35 percent over the total in 1973. Much of this increase is a result of the reclassification of the Charles Stark Draper Laboratory. When this institute is subtracted, the rate of increase drops to 3 percent.

[2] This represents an increase of $30 million over the amount obligated to Draper Laboratory in 1973.

[3] Cambridge Electron Accelerator, administered by Harvard University, and the Applied Physics Laboratory administered by the University of Washington. The combined total of obligations received by the two organizations was $4 million in 1973.

INTRODUCTION

Background

The Federal-wide data collection system which produces the statistics shown in this report was established in 1965 under the aegis of the Committee on Academic Science and Engineering (CASE) of the Federal Council for Science and Technology. Upon the termination of CASE, responsibility for the continuation of the survey series was assigned to the National Science Foundation. The survey gathers statistical data intended to provide a comprehensive picture of Federal funds awarded directly to institutions of higher education. Certain types of Federal programs are excluded, such as loans, Federal employee training, and funds awarded to State agencies for higher education. The following categories of Federal support are included: Research and development; R&D plant; facilities and equipment for instruction in the sciences and engineering; fellowships, traineeships, and training grants; general support for science (e.g., institutional grants); support for other scientific activities; and support for nonscience activities.

Separate data are provided for FFRDC's administered by institutions of higher education, selected independent nonprofit research institutes, and nonprofit-administered FFRDC's.

The data for 1974 presented in this report were obtained from the following 14 Federal agencies, listed by the acronyms and abbreviations used to designate them:

- AEC—Atomic Energy Commission[4]
- AID—Agency for International Development
- COMMERCE—Department of Commerce
- DOD—Department of Defense
- DOT—Department of Transportation
- EPA—Environmental Protection Agency
- HEW—Department of Health, Education, and Welfare
  - ADAMHA—Alcohol, Drug Abuse, and Mental Health Administration
  - CDC—Center for Disease Control
  - FDA—Food and Drug Administration
  - HRA—Health Resources Administration
  - HSA—Health Services Administration
  - NIE—National Institute of Education
  - NIH—National Institutes of Health
  - OE—Office of Education
  - SRS—Social and Rehabilitation Service
- HUD—Department of Housing and Urban Development
- INTERIOR—Department of Interior
- LABOR—Department of Labor
- NASA—National Aeronautics and Space Administration
- NSF—National Science Foundation
- OEO—Office of Economic Opportunity
- USDA—Department of Agriculture

These 14 agencies accounted for over 95 percent of all Federal funds obligated to the 2,512 universities and colleges and 21 university-administered FFRDC's included in part I of this report and to the 122 independent nonprofit institutions and 7 nonprofit-administered FFRDC's included in part II.

Dollar amounts reported herein represent actual obligations incurred by the agencies during the fiscal year, regardless of when the funds were actually spent. All amounts obligated during a fiscal year beginning on July 1st and

[4] Late in fiscal year 1974, the Atomic Energy Commission was replaced by two new agencies, the Energy Research and Development Administration (ERDA) and the Nuclear Regulatory Commission (NRC). This reorganization will be reflected in 1975 data. For 1974, all obligations to the two successor agencies are shown under AEC.

ending June 30th are included in that year's total. Since the year of obligation may not coincide with the year in which such funds are received or spent by the institution, totals reported by Federal agencies may not be comparable to actual expenditures as reported by the institutions.

Variations between Federal agency figures and those maintained by individual institutions may occur also in the case of institutions which are members of university systems. When an award is made in the name of the university system and the granting agency is unable to determine how its funds are distributed among the individual institutions within the system, the funds are reported as obligated to the system as a whole under the title "central system" or "system office." Such awards totaled $50 million obligated to 31 system offices in 1974.[5] Although this amount in total represents only 1 percent of all Federal obligations to universities and colleges, the effect on some individual institution totals may be significant. Institution totals will be understated by the amount allocated to them by the system offices.

Due to internal reorganization within HEW, many of the totals for subdivisions are not directly comparable to previous figures. For instance, the former Health Services and Mental Health Administration (HSMHA) was divided into four new subdivisions: the Health Resources Administration (HRA); Health Services Administration (HSA); Alcohol, Drug Abuse, and Mental Health Administration (ADAMHA) and Center for Disease Control (CDC), and some NIH programs were placed under the responsibility of HRA. Therefore, distributions of obligations of the components of HEW are shown for 1974 only.

[5] A list of the 31 system offices to which Federal agencies obligated funds is found at the end of summary table, appendix B, p. 71. Dollar amounts are reported in a separate volume. See National Science Foundation, *Detailed Statistical Tables, Federal Support to Universities, Colleges, and Selected Nonprofit Institutions, Fiscal Year 1974* (NSF 75-325) (Washington, D.C. 20550, 1975), tables B-25 through B-28. This volume may be obtained gratis from the National Science Foundation.

Part I

FEDERAL SUPPORT TO UNIVERSITIES AND COLLEGES

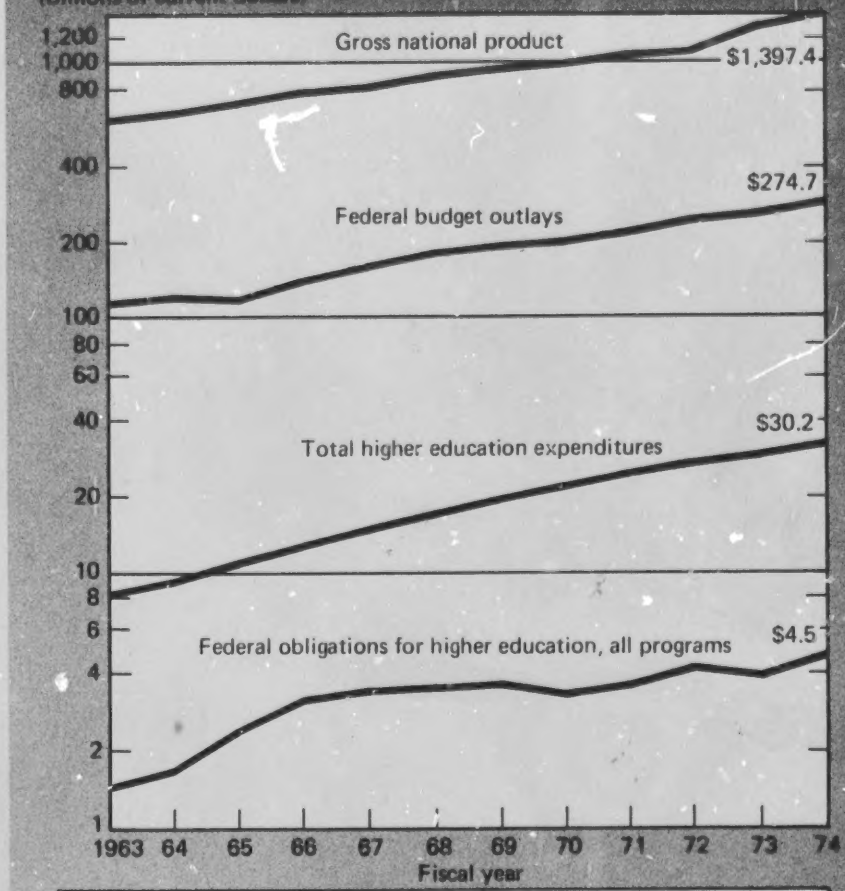
CATEGORIES

Trends

Federal obligations tto institutions of higher education rose from $3.8 billion in 1973 to $4.5 billion in 1974. The rate of increase for nonscience obligations was more than twice that for science obligations (27 percent vs. 11 percent); conversely, nonscience obligations were more severely affected by the declines which occurred between 1972 and 1973 (down 11 percent compared to 5 percent).

The chart compares annual rates of change of Federal support for higher education with selected economic indicators for the period covered by the survey series and demonstrates the declining share of all Federal moneys going to academic institutions. While Federal obligations to universities and colleges increased at a faster rate during the years 1963-67 than the other three indicators shown, the rate of increase has slowed since 1968 and in some years these obligations have actually decreased. In 1974 Federal obligations comprised 15 percent of all higher education expenditures. Though this reflects a slight gain over the 14 percent shown in 1973, it is still considerably below the proportions for 1965 through 1968, when the Federal Government was the source of more than 20 percent of all expenditures of academic institutions.

Federal obligations to universities and colleges represented about 0.3 percent of the total gross national product (GNP) in 1974, about the same proportion as in recent years. Only in 1966 and 1967 was the proportion higher than 0.4 percent. However, the current ratio is higher than the 0.2 percent in 1963. A similar pattern appears in the relationship between Federal obligations for higher education and total Federal expenditures for purchases of goods and services. For the latter, the proportion rose rapidly from 1963 to 1966, at which time it was over 2 percent, and then declined gradually to 1.6 percent in 1973 and 1974.



Economic indicator	Average annual growth (Percent)		Percent change			
	1963-67	1967-70	1970-71	1971-72	1972-73	1973-74
Gross national product	8	7	8	9	12	8
Federal budget outlays	9	8	8	10	6	11
Total higher education expenditures	15	14	11	10	8	8
Federal obligations for higher education, all programs	24	- 1	8	18	- 7	17

SOURCES: Department of Commerce, National Science Foundation, Office of Education, and Office of Management and Budget.

Both of the major categories of Federal support to academic institutions, science and nonscience, followed the general pattern shown in total obligations—rapid growth during the early years of the survey series followed by slower growth and occasional declines in the later years. Obligations for nonscience activities have tended to fluctuate more widely from year to year than those for academic science. Nonscience obligations, which in the first survey year (1963) accounted for only 6 percent of all Federal obligations to universities and colleges, made up 39 percent of the total in 1974.

In terms of constant (1967) dollars, Federal obligations began to level off in 1967, and the period of actual decline began in 1968. Though the 1974 total represents an increase of 8 percent in constant-dollar terms, the total was still below that for 1972. Thus, over the past few years Federal obligations have failed to keep up with inflation.

There has been substantial variation in the proportions of total Federal obligations allocated to the various types of activity since the survey series began. Academic science obligations, which comprised 94 percent of the total in 1963, declined to 61 percent 11 years later. Research and development, which made up 62 percent of all academic science obligations in 1963 and 56 percent in 1967, accounted for 76 percent of the total in 1974. During the same period, R&D plant obligations dropped from 8 percent to 1 percent of academic

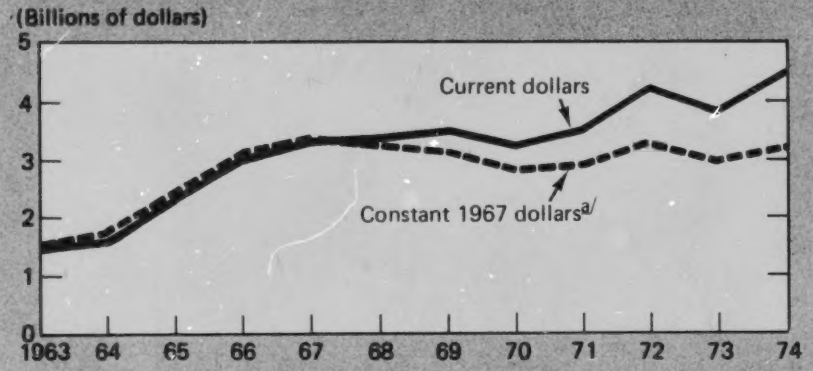
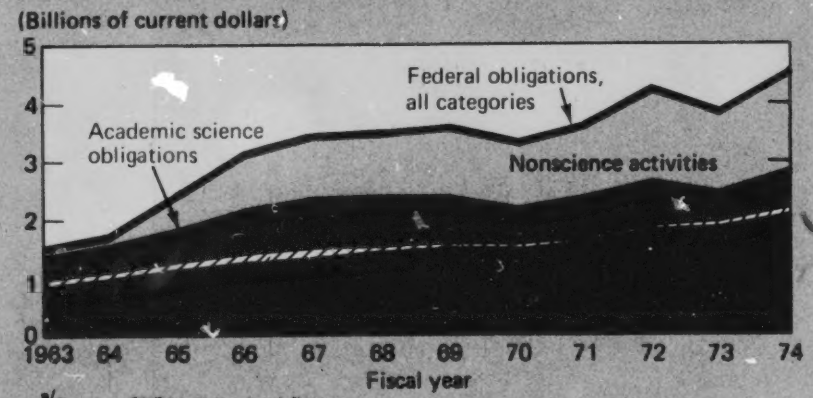
Source: National Science Foundation

from 50 percent of the academic science total to 65 percent between 1963 and 1967, dropped to 22 percent in 1973 and then rose slightly to 23 percent in the current survey. The decrease from 1967 to 1973 was largely a reflection of the phasing out of traineeship programs by the Department of Health, Education, and Welfare (HEW) and the National Science Foundation (NSF).

Federal obligations to universities and colleges: FY 1963-74



Growth by type of program

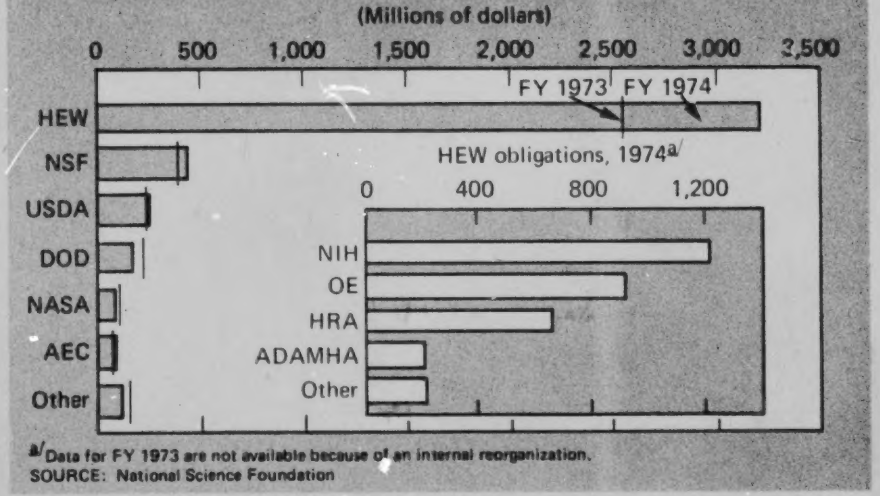


[a/] Based on GNP implicit price deflator.
SOURCE: National Science Foundation

HEW continued to be the largest source of Federal obligations to universities and colleges, allocating $3,234 million for all purposes in 1974. This represented an increase of 21 percent over the 1973 figure. The HEW share of all Federal obligations rose from 67 percent of the total in 1973 to 72 percent in 1974. The increase was primarily due to the release to NIH in 1974 of an estimated $210 million in impounded 1973 funds.

As in recent years, NSF obligated the second highest total—$450 million, or 10 percent of the total. The Department of Agriculture (USDA) ranked third with $261 million (6 percent of the total); this amount represented an increase of less than 2 percent over the 1973 amount. The Department of Defense (DOD) reported a significant decline in its obligations to academic institutions, from $233 million to $184 million, or 21 percent. This was largely due to the fact that the Charles Stark Draper Laboratory changed its corporate structure and shifted to the "independent nonprofit institutions" sector of the economy, involving $78 million from DOD, its largest funding agency. The National Aeronautics and Space Administration (NASA) also reported a decline in obligations to academic institutions (down 11 percent to $99 million), part of which was attributable to the reclassification of Draper Laboratory. The Atomic Energy Commission (AEC) accounted for another $99 million, up slightly from 1973. All other agencies surveyed totalled $135 million (3 percent of the total), a decline from the $146 million reported in 1973.

Federal obligations to universities and colleges, by agency: FY 1973 and 1974



[a/] Data for FY 1973 are not available because of an internal reorganization.
SOURCE: National Science Foundation

In 1974, for the first time, the Pacific States were the leading geographic division in terms of Federal funding received, with $728 million, or 16 percent of the total. The Middle Atlantic States, formerly in first place, dropped to third, below the South Atlantic States. It should be noted, however, that four leading divisions were relatively close in terms of total amounts received. By contrast, the East North Central States accounted for more than 1½ times the amount obligated to the fifth-ranked New England States.

Increases in Federal funding were shared by most of the States, with only seven States receiving less money in 1974 than in 1973. California again ranked first, showing an increase of 23 percent, to $527 million. Among the remaining States in the top 10, the rates of increase varied from 31 percent (North Carolina) to 8 percent (Ohio). Institutions in New York received the second largest total, $406 million, followed by Massachusetts, Texas, and Pennsylvania, in that order.

Change in Federal obligations to universities and colleges, by geographic division: fiscal years 1973-74

[Dollars in thousands]

Geographic division	1973	1974	Percent change
Total	$3,822,883	$4,462,623	16.7

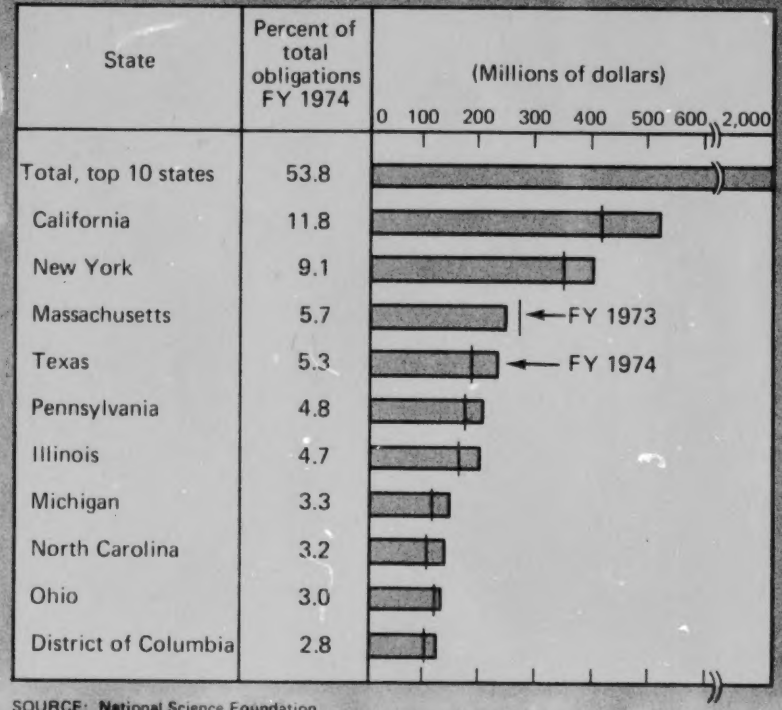
The 10 States receiving the largest amounts of Federal obligations accounted for $2,400 million, more than one-half of the total. Nine of the 10 were on the 1973 list; the District of Columbia, which had dropped off the list, returned in 1974, displacing Wisconsin. Only Massachusetts among the top 10 showed a net decrease (9 percent); had Draper Laboratory remained in the higher education sector, the total for Massachusetts would have shown a 22-percent increase.

Federal obligations to universities and colleges in the 10 states receiving the largest amounts: FY 1973 and 1974



SOURCE: National Science Foundation

For the second straight year, there was a greater concentration of Federal obligations to institutions in the largest size-class (obligations of $10 million or more). Institutions in that size-class received 69 percent of the total, slightly more than the proportion received by the 103 institutions in this group in 1973 and the 105 institutions in 1972. All institutions receiving $1 million or more accounted for nearly nine-tenths of the 1974 total, approximately the same as 1973. Obligations to institutions receiving $1 million or more rose 18 percent between 1973 and 1974, nearly three times the 7-percent increase experienced by the institutions in the smaller size-classes.

The 100 universities and colleges receiving the largest amounts of Federal obligations accounted for $2,941 million, an increase of 14 percent over the amount allocated to a similar group of institutions in 1973. The proportion of the total allocated to the top 100 institutions has remained relatively steady in recent years at about two-thirds.

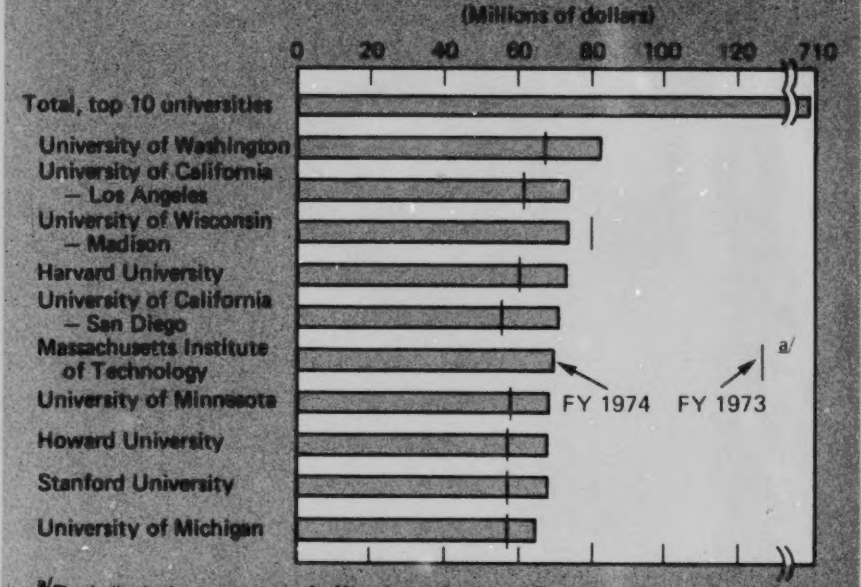
SOURCE: National Science Foundation

The 10 leading institutions accounted for 16 percent of the total amount obligated to all institutions, while 25 institutions (1 percent of the total) received 32 percent of the funds, and 50 institutions (2 percent) received nearly one-half of the total.

Among the top 10 institutions, only two received less funds in 1974 than in 1973: Massachusetts Institute of Technology (MIT) and the University of Wisconsin at Madison. The sharp decline in MIT's total is a result of the reclassification of the Draper Laboratory; the amount obligated to MIT itself remained virtually unchanged at $70 million. A decline in HEW's obligations for nonscience activities was responsible for the smaller decrease at the University of Wisconsin. The eight remaining institutions showed an increase in total Federal funding of 15 percent, with individual growth rates varying from 12 percent at the University of Michigan to 29 percent at the University of California, San Diego. The high rate of increase (almost twice the average) resulted from the construction of a new medical school building at San Diego.

Federal obligations to the 10 universities receiving the largest amounts: FY 1973 and 1974



a/ The decline in the amount shown for Massachusetts Institute of Technology reflects the reclassification of Draper Laboratory to the "other nonprofit" sector.

[1] Amounts shown represent awards to individual institutions. Awards to the Administrative offices of university systems are excluded because final allocation of funds is unknown.

[2] FY 1974 obligations represent total obligations from 14 Federal agencies which accounted for over 95 percent of all Federal obligations to universities and colleges in the United States, and for 99 percent of all Federal obligations for research and development to such institutions. These rankings may not apply to all individual institutions, some of which receive significant portions of their funding from agencies not included in the survey, such as the Department of Justice, the Arts and Humanities Foundation, or the Consumer Products Safety Commission.

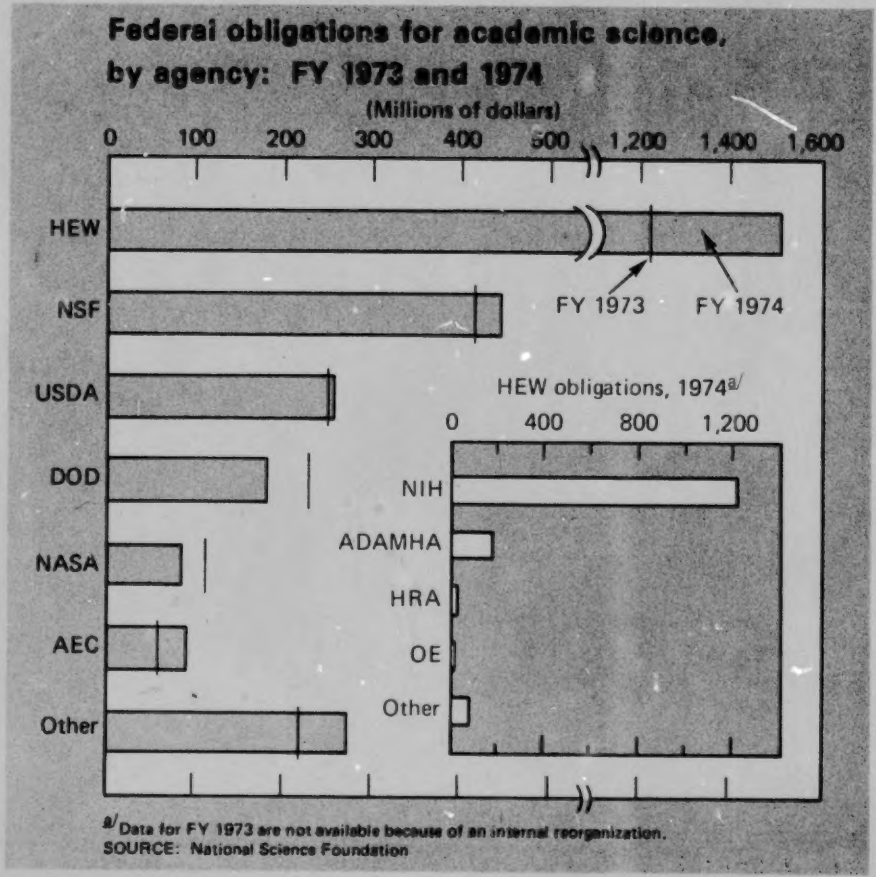
[3] Amount for MIT excludes $86 million obligated to the Charles Stark Draper laboratory, now classified as an independent nonprofit research institute.

SOURCE: National Science Foundation

Academic Science Support

Federal obligations for academic science rose 11 percent during the period 1973-74, to $2,736 million. In constant-dollar terms this amounts to only a 3-percent growth rate compared with 8 percent for Federal support of all programs. In 1963 and 1964 academic science accounted for 94 percent of all obligations to universities and colleges. The general trend toward allocation of smaller proportions of the total to scientific activities began in 1965, was interrupted in 1973, and then resumed in 1974 when 61 percent of all Federal obligations were earmarked for the sciences and engineering. By comparison, in 1972 the proportion was 63 percent, and in 1973, 64 percent.

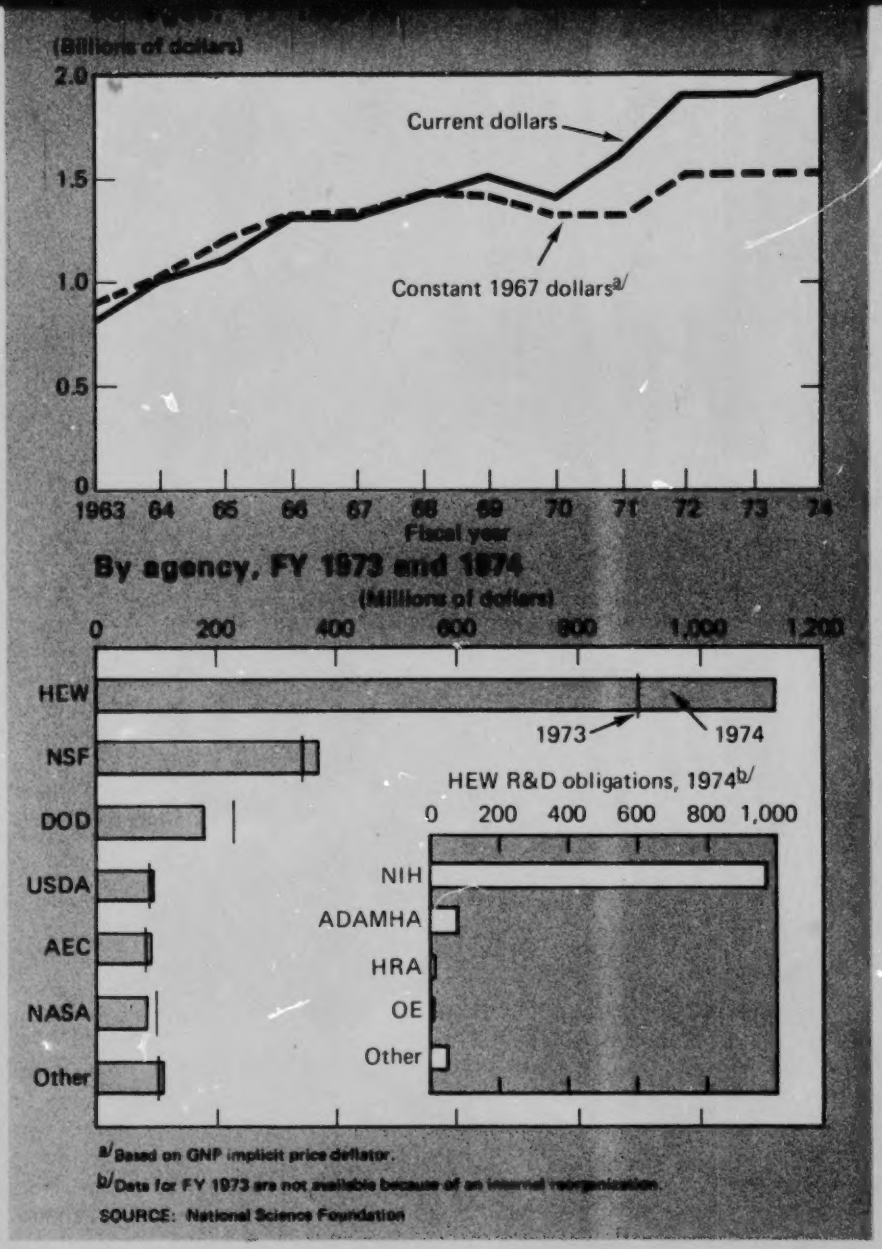
As was the case with total obligations, HEW supplied the largest portion of funds for academic science—$1,516 million, or 55 percent of the total. This was considerably lower than HEW's obligations were for nonscience activities. NSF obligations, on the other hand, which were entirely allocated to science and engineering activities, comprised 16 percent of the academic science total. USDA and DOD followed with 10 percent and 7 percent, respectively. The remaining 10 agencies surveyed accounted for $326 million, or 12 percent. Much of the decline in DOD and NASA academic science obligations resulted from the reclassification of Draper Laboratory.



The 14 surveyed Federal agencies reported a total of $2,085 million in obligations for research and development in academic institutions during 1974—a rise of 11 percent (3 percent in constant-dollar terms). Agencies not included in the survey are estimated to have obligated a total of only $16 million for research and development in universities and colleges—less than 1 percent of the total. Preliminary estimates indicate a growth rate of about 3 percent (in current dollars) between 1974 and 1975.[6]

HEW, the primary Federal supporter of academic research and development, supplied $1,129 million to universities and colleges, an increase of 25 percent over 1973. NSF, the second-ranking agency, accounted for $376 million, a rise of 8 percent. DOD allocated $184 million to academic R&D obligations, a decline of 21 percent since 1973. Since 1969, DOD's share of the total has declined from 19 percent to 9 percent. USDA obligations rose by 3 percent to $97 million, while the rate of increase for AEC, 11 percent, was counterbalanced by a 10-percent decline in NASA obligations. The other eight agencies surveyed showed an overall increase of 8 percent, to $112 million.

Together, HEW and NSF were the sources of 72 percent of the R&D funds obligated to institutions of higher education. More than nine-tenths of the HEW total was sponsored by two subdivisions, NIH and ADAMHA.



[6] Based on data from the National Science Foundation's *Detailed Statistical Tables. Federal Funds for Research, Development, and Other Scientific Activities. Fiscal Years 1974, 1975, and 1976*. Volume XXIV (NSF 75-323) (Washington, D.C. 20550, 1975).

FIELD OF SCIENCE

The life sciences, with $1,128 million, again led all other fields in terms of R&D obligations; this amount represented a 21-percent increase over the 1973 figure. HEW was the source of 83 percent of these funds, mainly through NIH.

Obligations in the physical sciences, the second largest field, declined slightly, to $262 million, or 13 percent of the total. NSF, the primary source of support in this field, supplied 32 percent of the total. Another 20 percent was supported by AEC, while NASA and DOD accounted for 17 percent and 13 percent, respectively.

The largest decline, both in absolute and relative terms, occurred in engineering. Federal obligations in this field fell by $29 million to $175 million, a drop of 14 percent. All other scientific fields showed increases, ranging from 4 percent in the environmental sciences to 13 percent in the mathematical sciences. The residual category, "Other sciences, n.e.c.", which includes interdisciplinary projects unclassifiable into the separately enumerated fields, accounted for $123 million—an increase of 41 percent over the 1973 total. HEW supplied 43 percent of these funds, largely through NIH, with NSF accounting for another 25 percent.

Change in Federal R&D obligations to universities and colleges, by field of science: fiscal years 1973-74

GEOGRAPHIC DISTRIBUTION

Institutions in the Pacific States again led the Nation in terms of Federal R&D obligations received, with $435 million—an increase of 16 percent over 1973. The rates of increase were highest in the outlying areas and the West South Central States (61 percent and 21 percent, respectively); only in New England was the 1974 total less than that for 1973, largely because of the reclassification of the Draper Laboratories as a nonprofit institution.

California institutions were the recipients of the largest amount of R&D obligations, $323 million, or 15 percent of the national total. New York and Massachusetts were in second and third places; the top three States occupied the same ranks as in 1973. Eight of the top 10 States in 1974 also appeared on the 1973 listing, the exceptions being Michigan and North Carolina. Together, the 10 leading States accounted for 61 percent of all Federal R&D obligations.

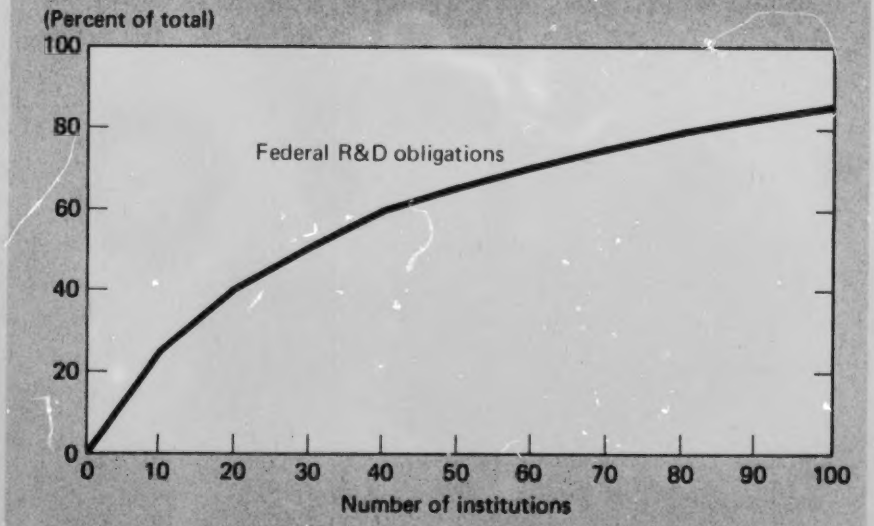
INSTITUTIONAL DISTRIBUTION

A total of 559 institutions received Federal R&D obligations in 1974, or 22 percent of all universities and colleges receiving Federal funds for all purposes. In addition to the 559 institutions, R&D funds were obligated to 19 system offices. Approximately the same number of institutions received Federal R&D awards in 1973.

R&D obligations were considerably more concentrated than was the case for all obligations. Of the R&D obligations to these 578 institutions and system offices, the top 100 received $1,775 million, or 85 percent, about the same proportion that was allocated to a similar group of institutions in 1973.

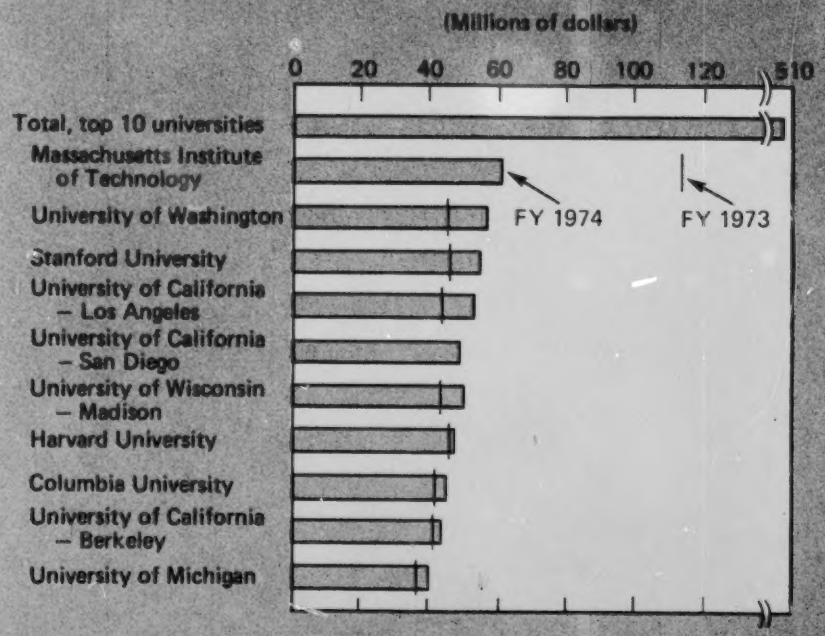
Distribution of Federal R&D obligations to the 100 universities and colleges receiving the largest amounts: FY 1974



SOURCE: National Science Foundation

The same institutions appeared as the top 10 in 1973 as in 1974. MIT was in first place, even after Draper Laboratory became an independent corporation. The University of Washington replaced the University of California at San Diego in the second position; Stanford remained third. Altogether, the 10 institutions accounted for $508 million, or 24 percent of the total.

Federal R&D obligations to the 10 universities receiving the largest amounts: FY 1973 and 1974



SOURCE: National Science Foundation

The 20 leading recipients of Federal R&D obligations accounted for 40 percent of the total in 1974. Throughout the 12-year period covered by the survey series, the proportion of the total accounted for by these same 20 institutions ranged from a high of 46 percent of the total in 1963 to a low of 38 percent in 1969. Most of the 20 institutions were near the top throughout the 12-year period and MIT ranked first in every year.

R&D Plant

R&D plant funds, making up less than 1 percent of Federal obligations, declined sharply between 1973 and 1974, from $43 million to $29 million. Of the six surveyed agencies providing plant funds in 1973, only four made such obligations in 1974, and of these only one—the National Science Foundation—obligated more funds for this purpose in 1974 than in 1973. Of the remaining agencies, AEC cut its obligations by 25 percent, HEW by 46 percent, and NASA by 98 percent.

R&D plant funds were obligated to 85 institutions in 1974, compared with 100 in 1973. The first 10 institutions received 77 percent of the total amount obligated, and the leading five accounted for 70 percent.

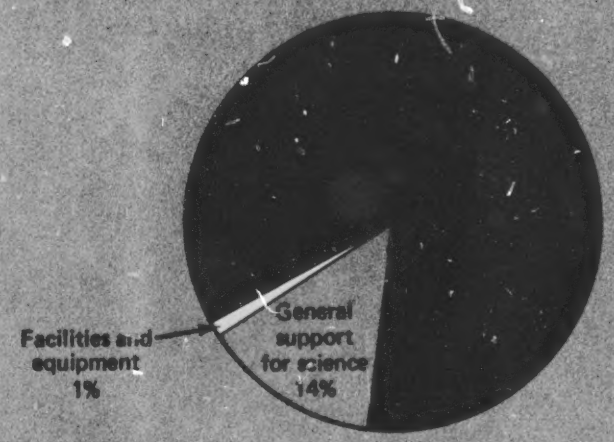
A total of $622 million was obligated in 1974 for scientific activities in non-R&D related areas, a 13-percent increase over the $549 million reported in 1973. Over one-half, or $327 million, was obligated for fellowships, traineeships, and training grants. General support for science accounted for 14 percent, and facilities and equipment for instruction for less than 1 percent. The aggregate of obligations for all other types of scientific activities, such as extension services, science information activities, and educational institutes, made up about one-third of the total.

Federal obligations for science education and other scientific activities to universities and colleges, by type of activity: FY 1974



a/ Includes all academic science activities such as extension services and science information activities that cannot meaningfully be assigned to one of the categories shown in this report.

Fellowships, Traineeships, and Training Grants

In 1974 Federal obligations for the development and maintenance of scientific and technical manpower through fellowships, traineeships, and training grants totaled $327 million, or 12 percent of all academic science funding. These obligations supported graduate training or study in the sciences or engineering.[7] During the 1973-74 period obligations in this category increased $39 million, or 14 percent, and represented the first increase since 1971. The largest increase, from $130 million to $170 million, was reported by NIH, reflecting the release of $60 million in impounded 1973 funds. Since 1971, when the participating agencies obligated $421 million, these obligations have declined at an average rate of 8 percent per year.

Recent shifts in Federal policies regarding graduate student support have significantly reduced the number of students supported by Federal fellowships and traineeships and increased the number of students who rely on self-support and institutional funds as major sources of support. Another NSF survey reported that the number of federally supported full-time graduate students declined 3 percent in 1973-74.[8] However, total full-time graduate enrollment increased 5 percent, indicating that the decline in Federal support has been offset by increases in the number of self-supported students (up 14 percent) and institutionally supported students (up 3 percent).

[7] Obligations for undergraduate and precollege training in the sciences and engineering are included in the "Other science activities" category; obligations for training or study in the arts and humanities at all levels are included under "Nonscience activities."

[8] National Science Foundation, *Science Resources Studies Highlights*, "Graduate Science Enrollment in 1974 Shows First Increase Since 1969" (NSF 75-328), October 22, 1975 (Washington, D.C. 20550).

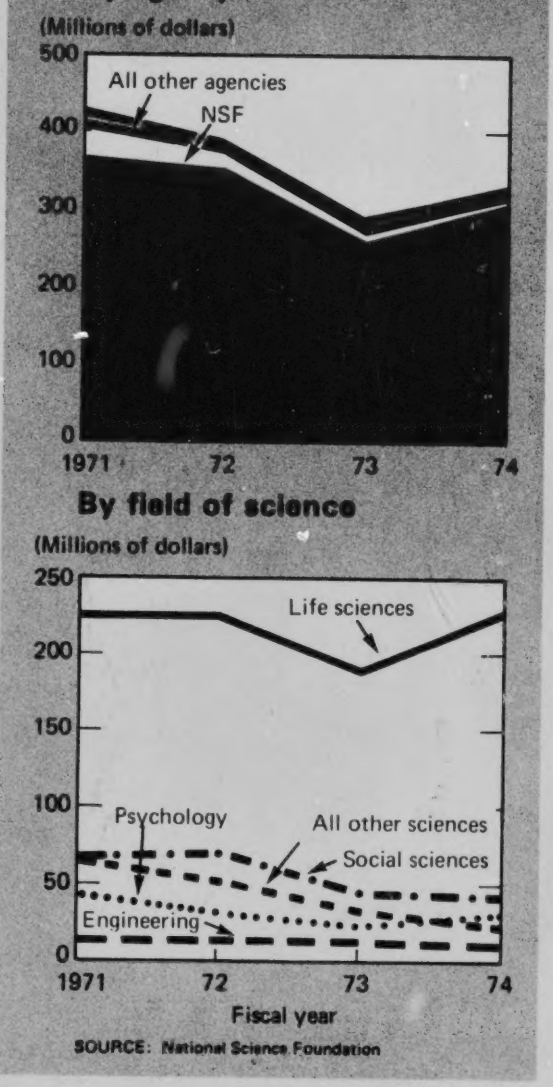
Other	212,369	211,592	209,713	205,691

Source: National Science Foundation

The bulk (99 percent of the total) of Federal funds for graduate fellows and trainees was provided by HEW, NSF, and EPA. HEW alone supplied $302 million, or 92 percent of all obligations. NIH funding totaled $170 million, an increase of $40 million from the 1973 level. As indicated earlier, the release of impounded 1973 funds was primarily responsible for the increase. ADAMHA funded $111 million in 1974. The other two major funding agencies, NSF and EPA, obligated $14 million and $7 million, respectively.

The 14 Federal agencies surveyed designated 69 percent of their obligations for fellowships, traineeships, and training grants to the life sciences. In this field, 66 percent was sponsored by NIH. Other fields receiving substantial training obligations were the social sciences ($41 million) and psychology ($27 million).

ships, traineeships, and training grants to universities and colleges: FY 1971-74



SOURCE: National Science Foundation

Seventy-eight institutions received more than $1 million each in 1974, with Harvard University receiving the largest amount, $11 million. The 10 leading institutions accounted for 24 percent of the total; the top 100 institutions, 86 percent.

Source: National Science Foundation

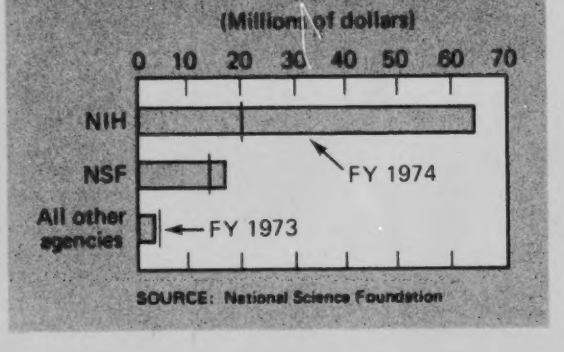
Facilities and Equipment for Instruction

Federal obligations for facilities and equipment for instruction in science and engineering declined from $13 million in 1973 to $3.5 million in 1974. This decline can be traced to the Office of Education's $9 million reduction in support of these activities to $371,000. The only other agency with programs in this area was NSF, which nearly doubled its level of support to $3 million.

General Support for Science

During 1974 Federal agencies awarded $86 million for general support for science programs. These programs are designed to strengthen or enlarge institutional capabilities for research and science education. They were primarily funded by NIH ($64 million) and NSF ($18 million). A $44 million increase in NIH funding largely accounted for the overall increase of 121 percent in Federal outlays for general support for science.

Federal obligations for general support for science to universities and colleges, by agency: FY 1973 and 1974



SOURCE: National Science Foundation

Other Science Activities, n.e.c.

Other science activities were allocated $206 million in 1974, a slight decrease from 1973 ($210 million). The largest obligator of funds in this area was USDA ($164 million) which reported cooperative extension activities under this category.

Section 4. FEDERALLY FUNDED RESEARCH AND DEVELOPMENT CENTERS ADMINISTERED BY UNIVERSITIES AND COLLEGES

The term "Federally Funded Research and Development Center" (FFRDC) is used to designate an organization managed by an institution of higher education (or a consortium of such institutions such as the Associated Universities for Research in Astronomy), established to meet a particular R&D need of a Federal agency.[a] The relationships between FFRDC's and their parent institutions vary considerably. In some cases the link is extremely close, with the facilities located on the university campus and the staff drawn from regular university faculty, while in other cases the link may be a tenuous one, with the FFRDC located at considerable distance from its parent and staffed by its own personnel. (See technical notes.)

Federal obligations to university-administered FFRDC's amounted to $1,083 million in 1974, an increase of 7 percent over the previous year. In constant-dollar terms, the amount obligated dropped by nearly 1 percent, continuing a steady decline from the 1966 maximum. During the last year, two of the smaller FFRDC's—Harvard's Cambridge Electron Accelerator and the University of Washington's Applied Physics Laboratory—were reclassified as part of their parent universities, reducing the total number to 21. Since the total obligations to these institutions were only about $4 million in 1973, the effect of their deletion on the rate of increase is relatively small.

In 1974, of all funds obligated to FFRDC's, 90 percent were earmarked for research and development and an additional 9 percent were for R&D plant. Obligations for fellowships, traineeships, and training grants declined sharply, in contrast to the 14-percent increase in similar obligations to the universities and colleges themselves.

Source: National Science Foundation

FFRDC's, supplying 58 percent of the total amount, and was the primary sponsor for 10 of the 21 institutions in this category. NASA, in second place, accounted for another 20 percent of the total, with third-ranked DOD providing 16 percent. All other agencies combined (NSF, HEW, Labor, and DOT) supplied only 6 percent of the total amount.

The 10 university-administered FFRDC's receiving the largest amount of Federal obligations accounted for 90 percent of the $1,083 million obligated. By comparison, the same 10 institutions accounted for 91 percent of the funds obligated to 23 FFRDC's in 1973. The leading FFRDC, NASA's Jet Propulsion Laboratory (administered by California Institute of Technology), alone accounted for $211 million, 19 percent of the total. However, on the basis of information derived from NSF's Survey of Expenditures for Scientific and Engineering Activities at Universities and Colleges for recent years, it is estimated that only about one-half of this amount was spent for intramural

Source: National Science Foundation

Livermore Laboratory, administered by the University of California for AEC, ranked second with 14 percent of the total, followed by the Los Alamos Scientific Laboratory, also sponsored by AEC, with 13 percent.

All of the 10 leading FFRDC's showed increases between 1973 and 1974. The largest proportional increase took place in the Lawrence Livermore Laboratory which received 9 percent more in 1974 than in 1973; the University of Chicago's National Accelerator Laboratory and MIT's Lincoln Laboratory followed with 8 percent each. The increase was smallest at the Stanford Linear Accelerator Center—only 1 percent.

[9] National Science Foundation. *Detailed Statistical Tables. Expenditures for Scientific and Engineering Activities at Universities and Colleges. Fiscal Year 1974* (NSF 75-318) (Washington, D.C. 20550, 1975) reports a total of $113 million in intramural R&D expenditures for 1974.

Part II

FEDERAL SUPPORT TO SELECTED NONPROFIT INSTITUTIONS

The 122 independent nonprofit research institutes included in the 1974 survey received a total of $366 million for research, development, and R&D plant from the 14 surveyed agencies.[10] Of this amount, R&D obligations accounted for all but $740,000, which was obligated to three institutes for R&D plant. By comparison, in 1973 there were 111 institutions which received $271 million, of which $2 million represented obligations for R&D plant.[11]

The $366 million obligated to the selected research institutes represents 52 percent of the $709 million obligated by all Federal agencies to all nonprofit institutions in the country (excluding FFRDC's).[12] It should be noted that the latter figure includes funds obligated to nonprofit hospitals, private foundations, societies and academies of science, trade associations, science exhibitors, and other nonprofit organizations not included in the present survey. However, on the basis of a survey of 1973 R&D expenditures conducted by NSF in 1974, it estimated that the research institutes included in this survey accounted for about four-fifths of all federally funded R&D expenditures of all nonprofit research institutes in the country.[13]

[10] See technical notes, p. 27, for information on the selection process for independent nonprofit institutions in this study.

[11] Fluctuations in reported levels of agency support reflect primarily actual changes in the amount of obligations from year to year and, secondly, changes in the universe of research institutes meeting the criteria for inclusion in the survey.

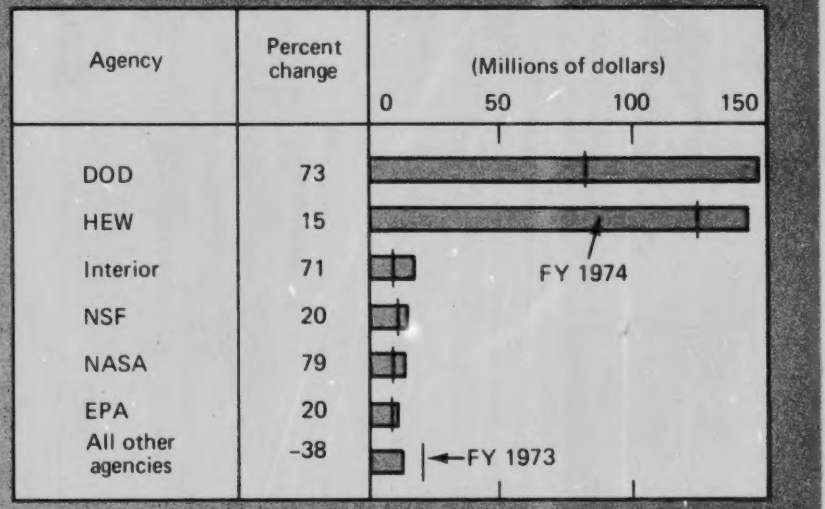
[12] National Science Foundation, *Detailed Statistical Tables, Federal Funds for Research, Development, and Other Scientific Activities, Fiscal Years 1974, 1975, and 1976*, Volume XXIV (NSF 75-323), *op. cit.* reports $703 million obligated to nonprofit institutions for research and development and $6 million for R&D plant.

[13] National Science Foundation, *R&D Activities of Independent Nonprofit Institutions, 1973* (NSF 75-308) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1975). Research institutes as a group accounted for about two-thirds of all federally funded R&D expenditures in the nonprofit sector of the economy (excluding FFRDC's).

Agency Distribution

Of the $366 million in Federal obligations to independent nonprofit research institutes, DOD supplied $149 million, or 41 percent. DOD has been the major source of obligations to research institutions in every year except 1973, when HEW was first. HEW was only slightly below the DOD total in 1974, with $144 million, or 39 percent of the total. While the increase in the number of institutions for which the agencies reported obligations is partly responsible for the apparent 35-percent increase (25 percent in constant-dollar terms), data from NSF's *Federal Funds for Research, Development, and Other Scientific Activities* series indicate a rise of about 15 percent between 1973 and 1974. The largest increase, that of DOD, resulted from the addition of the Charles Stark Draper Laboratory to the nonprofit sector.

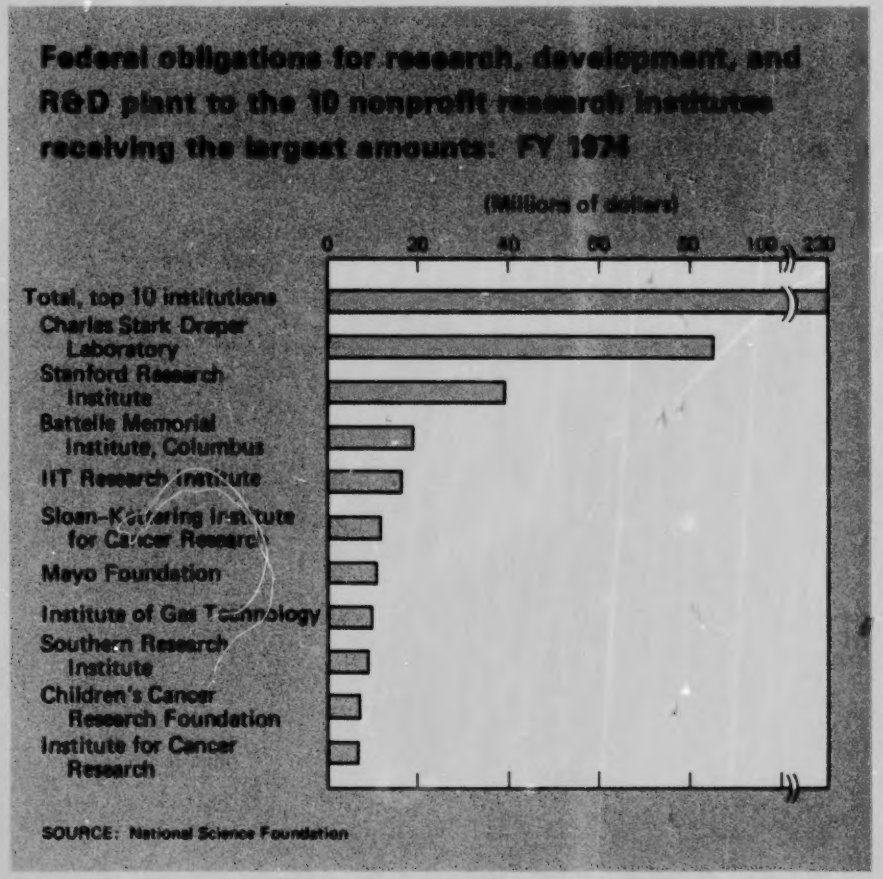
Change in Federal obligations to nonprofit research institutes for research, development, and R&D plant, by agency: FY 1973 and 1974



SOURCE: National Science Foundation

Institutional Distribution

Federal R&D and R&D plant obligations were highly concentrated in a relatively small number of research institutes. The 10 leading institutes accounted for 60 percent of the total; the top 20, for 74 percent. The Charles Stark Draper Laboratory received the largest amount, 23 percent of the total, more than twice the amount obligated to the second-ranked Stanford Research Institute. SRI, in turn, received more than twice as much as the Battelle Memorial Institute's Columbus Division, which was ranked third.



ADMINISTERED BY INDEPENDENT NONPROFIT INSTITUTIONS

The seven institutions classified as nonprofit-administered FFRDC's received a total of $185 million in 1974. This amount represents a decline of 3 percent since 1973, when these same seven institutions received $190 million. In constant dollars, the rate of decline was 10 percent.

DOD remained the largest supporter of nonprofit FFRDC's, obligating $135 million, or nearly three-fourths of the total. Among the services, the Air Force was the major sponsoring agency for four of the seven FFRDC's. AEC, the major sponsoring agency for Battelle Memorial Institute's Pacific Northwest Laboratory and the Atomic Bomb Casualty Commission, accounted for another $23 million. Together, the two major agencies accounted for 85 percent of all obligations to nonprofit FFRDC's.

The Aerospace Corporation, in first place throughout the survey series, received over one-third of the Federal funds obligated to all nonprofit-administered FFRDC's, even through its funding declined by 17 percent from the 1973 total of $75 million. MITRE, the second-ranked institution, reported the largest gain in absolute terms, $9 million, for a total of $59 million. Significant increases were also reported in the funding for Battelle's Pacific Northwest Laboratory, the Atomic Bomb Casualty Commission, and Analytical Services, Inc., while funding for RAND Corporation and Institute for Defense Analyses declined by 13 percent and 17 percent, respectively.

Distribution of Federal obligations to nonprofit-administered FFRDC's by agency: fiscal year 1974

APPENDIX A

Technical Notes

CONCEPTS AND LIMITATIONS

The dollar amounts in this report represent obligations to academic institutions, other selected nonprofit organizations, and associated Federally Funded Research and Development Centers (FFRDC's), allocated by 14 Federal agencies. These agencies accounted for 95 percent of all Federal obligations to universities and colleges, and for over 99 percent of all R&D obligations. Data for three of the reporting agencies, the Agency for International Development, the Department of Housing and Urban Development, and the Department of Labor, were combined for the purpose of tabular presentation. These units constitute the "Other" category used as the final column heading in tables showing funding by agency.

Dollar totals reflect actual obligations by the reporting agency during a fiscal year (July 1 to June 30) regardless of when funds were actually spent by a recipient. Certain allocations for financial assistance by Federal agencies were excluded from the study, notably loans, such as those made by the Office of Education (OE), and agency support of Federal employee training and development activities. Obligations were reported in amounts rounded to the nearest thousand dollars.

Data for the individual institutions represent direct support from Federal agencies and therefore do not include amounts subcontracted to or from other institutions. Consequently, the location of actual performance of obligated amounts cannot be identified if that performance takes place at some site other than that of the institution to which the funds are obligated. In cases of interagency transfers of funds, the agency that made the final distribution of the funds to academic or other nonprofit institutions reported the obligations.

terms of the individual institutions comprising a system. Federal dollars awarded directly to the administrative center of a system are listed separately. However, where the final allocation of the funds is not known at the time the award is made, agencies report the funds as obligations to the system's administrative office, or "central system." In many cases, the Federal funds are distributed by the system's central office to individual institutions. To the extent this filtering effect takes place, the amounts reported for the individual institutions within a system may be understated. Obligations were reported in 1974 for 2,481 individual institutions and 31 "central system" offices.

Among the categories of support reported by Federal agencies, amounts shown for individual institutions may not always indicate the way the funds are actually spent by these organizations. For instance, the entire obligations of DOD were reported as research and development, although some of the funds were actually expended for plant and facilities.

RELATIONSHIP OF THIS STUDY TO *FEDERAL FUNDS FOR RESEARCH, DEVELOPMENT, AND OTHER SCIENTIFIC ACTIVITIES*

Both this study and *Federal Funds for Research, Development, and Other Scientific Activities*[1] series obtain data on obligations by Federal agencies for research and development and R&D plant to universities, colleges, and other nonprofit institutions, and their associated FFRDC's. This study is oriented toward obtaining information on total Federal support for individual institutions, while the *Federal Funds* study obtains data on research and development and R&D plant obligated by Federal agencies to each sector of the economy, including Government, industry, universities and colleges, and all other nonprofit organizations. In *Federal Funds*, the emphasis is on character of activity and type of performer, rather than individual academic recipients.

In general, there is conformity of concepts and definitions used in the two studies. Data do not and cannot, however, conform in all respects. Reporting differences may be traced to one or more of the following reasons:

(a) In *Federal Funds*, data are compiled from agency budgets in terms of aggregate sector totals. In this report, data were generated from each agency's information system in terms of totals for each recipient.

[1] National Science Foundation, *Federal Funds for Research, Development, and Other Scientific Activities, Fiscal Years 1974, 1975, and 1976*, Volume XXIV (NSF 75-334) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1976).

agencies, while the *Federal Funds* surveys obtain data on a Government-wide basis.

(c) The National Institutes of Health (NIH) reported its General Research Grants Program as "research and development" in *Federal Funds* and as "general support for science" in this report. In addition, for *Federal Funds* the National Science Foundation (NSF) reported as "research and development" that portion of institutional development funds which is expended for R&D activities, whereas for this study all such funds were reported as "general support for science."

(d) For the purpose of this report, "selected nonprofit organizations" include primarily independent nonprofit research institutions. Omitted are hospitals, professional and technical societies, academies of science, private philanthropic foundations, museums and other exhibitors, and other types of nonprofit organizations which are included in the *Federal Funds* classification of nonprofit organizations.

(e) In cases of interagency transfers of funds, the present study instructs the agency that actually obligates funds to report the obligation. In *Federal Funds*, agencies initiating the interagency transfers report the obligated amounts.

DEFINITION OF TERMS

University or college consists of all parts of an academic institution, such as a college of liberal arts, professional school, hospital, school of agriculture, agricultural experiment station, etc.—except an associated FFRDC. Universities and colleges include all institutions of higher education in the United States that offer at least 2 years of college-level studies in residence. The universe of academic institutions for this survey is based upon the *Higher Education Directory* for 1973-74, compiled by the National Center for Education Statistics, and NSF's Institutional Technical Reference File. To be included in this report, an institution must have received some Federal support in fiscal year 1974, and must possess a significant degree of autonomy with respect to educational administrative responsibilities. Thus, universities and colleges organized under systems, i.e., groups of institutions collectively having legal status and generally accorded recognition by a State, by a board of education, or other relevant organization, are shown as separate institutions in cases where significant autonomy exists. Obligations to branches and campuses of institutions are not shown separately but are included in the totals for their parent institutions. Obligations to the service academies and to the U.S. Department of Agriculture Graduate School were excluded from the study.

nonprofit-administered FFRDC's. Compiled prior to the start of the 1974 survey, the list of research institutes sent to Federal agencies was made up of those institutions that were believed most likely to receive at least $300,000 in Federal R&D obligations for 1974. To assure as complete coverage as possible, the list includes several institutions that had funding levels below $300,000. Since the survey produced funding information on these smaller organizations, they are included in the report. Excluded from the study of selected nonprofit institutions are such organizations as voluntary nonprofit hospitals, professional and technical societies, academies of science, philanthropic foundations, and museums and other science exhibitors.

FFRDC's in this report are organizational units managed by universities and colleges or other nonprofit institutions. Generally, these units have been established to meet a particular R&D need of a Federal agency. Uniform identification and classification criteria have been developed for use by all sponsoring agencies. To be classified as an FFRDC, an organization should:

(a) Perform primarily one or more of the following: basic research, applied research, development, or management of research and development. Specifically excluded are organizations engaged primarily in routine quality control and testing, routine service activities, production mapping surveys, and information dissemination;

(b) Constitute a separate operational unit within the parent organization or be organized as a separately incorporated organization;

(c) Perform actual research and development or R&D management either upon direct request of the Government or under a broad charter from the Government, but in either case under the direct monitorship of the Government;

(d) Receive its major financial support—70 percent or more—from the Federal Government, usually from one agency;

(e) Have, or to be expected to have, a long-term relationship—about 5 years or more—with its sponsoring agency, as evidenced by the specific obligations it and the agency assume;

(f) Be established in the contract so that most or all of the facilities are owned or funded by the Government; and,

(g) Have an average annual budget, including operating and capital equipment, of at least $500,000.

other nonprofit institutions. Of the 21 FFRDC's associated with universities and colleges in 1974, 13 are administered by individual institutions, 7 are managed by consortia of universities, and Argonne National Laboratory is administered jointly by the University of Chicago and the Argonne Universities Association.

Academic science includes the sum of activities classified under six categories: research and development; R&D plant; facilities and equipment for instruction in science and engineering; fellowships, traineeships, and training grants; general support for science; and other science activities. Each of these categories is defined below.

Research is defined as scientific inquiry. It includes basic studies—those oriented toward deeper or more meaningful understanding and knowledge per se in a particular subject or field; and applied studies—those aimed at new or more complete knowledge in the light of potential practical application.

Development is the systematic use of scientific knowledge directed toward the production of useful materials, devices, systems, or methods, including design and development of prototypes and processes. It excludes quality control, routine product testing, and production.

R&D plant includes all direct, indirect, incidental, or related costs resulting from, or necessary to the construction of, acquisition of, major repair to, or alterations in structures, works, fixed equipment, facilities, or land for use in scientific *research and development*. Fixed equipment includes accelerators, reactors, wind tunnels, radio telescopes, etc.

Facilities and equipment for instruction in science and engineering include all direct, indirect, incidental or other costs relating to the construction, acquisition, renovation, modification, repair, or rental of facilities, land, works, or equipment for use in *instruction* in science and engineering.

Fellowships, traineeships, and training grants include all awards (stipends and cost-of-education allowances) for the post-baccalaureate training of individuals or groups of individuals to meet the future demand for scientific and technical manpower. *Excluded* from this category are funds for research institutes, seminars, and conferences; educational institutes, seminars, and conferences; the development of educational techniques or materials; and training at the precollege and undergraduate levels. All such funds are included in category 6, "other scientific activities," or, if not specifically science-oriented, in category 7, "nonscience activities."

General support for science includes activities which provide support for nonspecific or generalized purposes

or institutions as a whole. "General support" implies a spectrum of varying types of support. At one extreme is support provided without any specification of purpose other than that funds be used for scientific activities. Another kind of "general support" is to be found in projects that provide funds for activity within a specified field of science or engineering but without specification of explicit purpose. The distinguishing feature of "general support for science" projects is that they permit a significant measure of freedom as to purpose (research, faculty support, education, institutional support, etc.). Among the projects reported under the category "General Support for Science" were projects awarded through the following agency programs:

NIH General Research Support Grants
NIH Health Sciences Advancement Awards
NIH Biomedical Sciences Support Grants
NSF Institutional Grants for Science
NSF Science Development Program
NSF College Science Improvement Program
NSF Cooperative College—School Science Program

Other science activities include USDA's cooperative extension programs; *educational or research* institutes, seminars, or conferences; and other science activities not included in one of the other five academic science categories. As noted in the earlier definitions, this category also includes funds for scientific and engineering training at the precollege and undergraduate levels.

Nonscience activities include all other programs not included in the six science categories defined above, and obligations for all activities in fields outside the sciences and engineering, or which cannot be specifically assigned to the sciences and engineering.

Fields of Science

Science and engineering fields consist of eight broad categories and 32 detailed fields. Shown below are definitions of each broad field together with an illustrative list of disciplines under each of the detailed fields. In each case, "n.e.c." stands for "not elsewhere classified".

(a) **Physical sciences** are concerned with the understanding of the material universe and its phenomena. They comprise the fields of astronomy, chemistry, physics, and physical sciences not elsewhere classified. Examples of the disciplines under each of these fields follow.

Astronomy:
Laboratory astrophysics; optical astronomy; radio astronomy; theoretical astrophysics; X-ray, gamma-ray, neutrino astronomy.

Physics:
Acoustics; atomic and molecular; condensed matter; elementary particles; nuclear structure; optics; plasma.

Physical sciences, n.e.c.

(b) **Mathematical sciences** employ logical reasoning with the aid of symbols and are concerned with the development of methods of operation employing such symbols. Examples of mathematical disciplines are

Algebra; analysis; applied mathematics; computer science; foundations and logic; geometry; numerical analysis; statistics; and topology.

(c) **Environmental sciences** (terrestrial and extraterrestrial) are concerned with the gross nonbiological properties of the areas of the solar system which directly or indirectly affect man's survival and welfare. They comprise the fields of atmospheric sciences, geological sciences, oceanography, and environmental sciences not elsewhere classified. Examples of the disciplines under each of these fields are

Atmospheric sciences:
Aeronomy; solar; weather modification; extraterrestrial atmospheres; meteorology.

Geological sciences:
Engineering geophysics; general geology; geodesy and gravity; geomagnetism; hydrology; inorganic geochemistry; isotopic geochemistry; organic geochemistry; laboratory geophysics; paleomagnetism; paleontology; physical geography and cartography; seismology; soil sciences.

Oceanography:
Chemical oceanography; geological oceanography; physical oceanography; marine geophysics.

Environmental sciences, n.e.c.

(d) **Engineering** is concerned with studies directed toward developing engineering principles or toward making specific scientific principles usable in engineering practice. Engineering is divided into eight categories: Aeronautical, astronautical, chemical, civil, electrical, mechanical, metallurgy and materials, and engineering not elsewhere classified.

Aeronautical:
Aerodynamics.

Astronautical:
Aerospace; space technology.

Civil:
Architectural; hydraulic; hydrologic; marine; sanitary and environmental; structural; transportation.

Electrical:
Communication; electronic; power.

Mechanical:
Engineering mechanics.

Metallurgy and materials:
Ceramic; mining; textile; welding.

Engineering, n.e.c.
Agricultural; industrial and management; nuclear; ocean engineering; systems.

(e) **Life sciences** consist of the biological, clinical medical, other medical sciences and life sciences not elsewhere classified.

Biological sciences are those which, apart from the clinical medical and other medical sciences defined below, deal with the origin, development, structure, function, and interaction of living things. The agricultural and basic medical sciences are included. Examples of biological sciences are

Anatomy; animal sciences; bacteriology; biochemistry; biogeography; biological oceanography; biophysics; ecology; embryology; entomology; evolutionary biology; genetics; immunology; microbiology; nutrition and metabolism; parasitology; pharmacology; physical anthropology; physiology; plant sciences; radiobiology; systematics.

Clinical medical sciences are concerned with the study of the patheogenesis, diagnosis or therapy of a particular disease or abnormal condition in living human subjects under controlled conditions.

Other medical sciences are concerned with studies of the causes, effects, prevention, or control of abnormal conditions in man or in his environment as it relates to health, except for the clinical aspects as defined above.

Life sciences, n.e.c.

(f) **Psychology** deals with behavior, mental processes, and individual and group characteristics and abilities. Psychology is divided into three categories: biological aspects, social aspects, and psychological sciences not elsewhere classified. Examples of the disciplines under each of these fields are

chology; comparative psychology; ethology.

Social aspects:
Social psychology; educational, personnel, vocational psychology and testing; industrial and engineering psychology; development and personality.

Psychological sciences, n.e.c.

(g) **Social sciences** are directed toward an understanding of the behavior of social institutions and of individuals as members of a group. These include anthropology, economics, history, linguistics, political science, sociology, and social sciences not elsewhere classified. Examples of the disciplines under each of these fields are

Anthropology:
Archaeology; cultural and personality; social and ethnology; applied anthropology.

Economics:
Econometrics and economic statistics; history of economic thought; international economics; industrial, labor and agricultural economics; macroeconomics; microeconomics; public finance and fiscal policy; theory.

History:
Cultural; political, social; history and philosophy of science.

Linguistics:
Anthropological-archaeological; computational; psycholinguistics; sociolinguistics.

Political science:
Area or regional studies; comparative government; history of political ideas; international relations and law; national political and legal systems; political theory; public administration.

Sociology:
Comparative and historical complex organizations; culture and social structure; demography; group interactions; social problems and social welfare; sociological theory.

Social sciences, n.e.c.
Research in law and education, n.e.c.; socioeconomic geography.

(h) **Other sciences not elsewhere classified** for this report include single projects as well as multidisciplinary and interdisciplinary projects that could not be classified within one of the above broad fields of science.

APPENDIX B

Statistical Tables

UNIVERSITIES AND COLLEGES

Overall Summary

B-1. Federal obligations to universities and colleges, by type of activity and agency, FY 1963-74 1
B-2. Federal obligations to universities and colleges, by agency and type of activity, FY 1974 3

Geographic Distribution

B-3. Federal obligations to universities and colleges and the number of recipient institutions, by geographic division, State, and type of activity, FY 1974 4
B-4. Federal obligations to universities and colleges, by geographic division, State, and agency, FY 1974 7
B-5. Federal obligations for academic science, by geographic division, State, and agency, FY 1974 8

Ranking Tables

B-6. Federal obligations to the 100 universities and colleges receiving the largest amounts, by type of activity, FY 1974 9
B-7. Federal obligations to the 100 universities and [illegible] agency, FY 1974 11
B-8. Federal obligations for academic science to the 100 universities and colleges receiving the largest amounts, by agency, FY 1974 13
B-9. Federal obligations for research and development to the 100 universities and colleges receiving the largest amounts, by agency, FY 1974 15
B-10. Federal obligations for fellowships, traineeships, and training grants to the 100 universities and colleges receiving the largest amounts, by agency, FY 1974 17
B-11. Federal obligations for general support for science to the 100 universities and colleges receiving the largest amounts, by agency, FY 1974 19
B-12. Federal obligations for facilities and equipment for instruction in the sciences and engineering to the 100 universities and colleges receiving the largest amounts, by agency, FY 1974 21

Field of Science

B-13. Federal obligations for research and development to universities and colleges, by detailed field of science and agency, FY 1974 23
B-14. HEW obligations to universities and colleges for research and development, by detailed field of science and HEW component, FY 1974 24
B-15. DOD obligations to universities and colleges for research and development, by detailed field of science and DOD component, FY 1974 25
B-16. Federal obligations for research and development to the 100 universities and colleges receiving the largest amounts, by major field of science, FY 1974 26
B-17. Federal obligations for fellowships, traineeships, and training grants to universities and colleges, by detailed field of science and agency, FY 1974 28
B-18. HEW obligations to universities and colleges for fellowships, traineeships, and training grants, by detailed field of science and HEW component, FY 1974 29
B-19. Federal obligations for fellowships, traineeships, and training grants to the 100 universities and colleges receiving the largest amounts, by major field of science, FY 1974 30

Type of Control

B-20. Federal obligations to universities and colleges, by agency and type of control, FY 1974 32
[illegible] and the number of recipient institutions, by geographic division, State, type of control, and type of activity, FY 1974 33
B-22. Percent distribution of Federal obligations to universities and colleges, by geographic division, State, type of control, and type of activity, FY 1974 38
B-23. Federal obligations to the 100 public universities and colleges receiving the largest amounts, by agency, FY 1974 41
B-24. Federal obligations to the 100 private universities and colleges receiving the largest amounts, by agency, FY 1974 43

Institution Listings

B-25. Federal obligations to universities and colleges, by State, institution, and type of activity, FY 1974 45
B-26. Federal obligations to universities and colleges, by State, institution, and agency, FY 1974 .. 74
B-27. Federal obligations to universities and colleges for research and development, by State, institution, and agency, FY 1974 102
B-28. Federal obligations to universities and colleges for R&D plant, by State, institution, and agency, FY 1974 110

UNIVERSITY-ADMINISTERED FEDERALLY FUNDED RESEARCH AND DEVELOPMENT CENTERS

B-29. Federal obligations to Federally Funded Research and Development Centers administered by universities and colleges, by agency and type of program, FY 1974 112
B-30. Federal obligations to Federally Funded Research and Development Centers administered by universities and colleges, by State, institution, and type of activity, FY 1974 113
B-31. Federal obligations to Federally Funded Research and Development Centers administered by universities and colleges, FY 1963-74 115

NONPROFIT RESEARCH INSTITUTES AND NONPROFIT-ADMINISTERED FEDERALLY FUNDED RESEARCH AND DEVELOPMENT CENTERS

B-32. Federal obligations for research and development to nonprofit institutions, by geographic division, State, institution, and agency, FY 1974 117
B-33. Federal obligations for research and development and R&D plant to Federally Funded Research and Development Centers administered by nonprofit institutions, FY 1968-74 120

OBLIGATIONS OF SELECTED FEDERAL AGENCIES TO UNIVERSITIES AND COLLEGES, RANKED IN DESCENDING ORDER OF AMOUNTS RECEIVED, BY SOURCE, FY 1974
